

For car modification with car'LED

We have had to make a few modifications to car on.

Let's take a look at how this whole process works, Separate the headlamps(right & left)from your car after opening your car bonnet. Disconnect the plug and remove the dust helmet.

Now we are need to start loading up the new car'led. First putting the car'led pack into the light slots along the groove. The car'led has seized up

Closed the dust helmet carefully. Then tighten the ventilation fan with a screwdriver. You have to hoid them fiush against each other.

"Everything is fixed up" worked better than HID
